GUIDA IN ITINERE ALLE PIANTE DELL'ORTO BOTANICO DEL MUSEO DI STORIA NATURALE DEL MEDITERRANEO

**Valerio Lazzeri
Antonio Borzatti de
Loewenstern**

BETULACEAE - FABACEAE

La guida vuole essere un mezzo per "portare a casa" le piante che crescono all'interno dell'orto botanico del Museo di Storia Naturale del Mediterraneo.

Un orto botanico è un qualcosa di dinamico dove, oltre alle specie coltivate per essere esposte ai visitatori, ne sopraggiungo anche altre che riescono a trovarvi le condizioni adatte a costituire una presenza più o meno stabile.

La guida attuale è da considerarsi in itinere e sarà implementata sino a completare la descrizione di tutte le famiglie botaniche rappresentate nel nostro orto.

La specie presenti nella guida sono elencate in ordine alfabetico in base alla famiglia botanica di appartenenza.

**specie nata
spontaneamente**

**specie coltivata dal
Museo**

specie autoctona

specie aliena

periodo di fioritura

Betulaceae – nocciolo comune

Corylus avellana L.

Betulaceae – carpino bianco

*Carpinus
betulus* L.

Boraginaceae – borragine comune

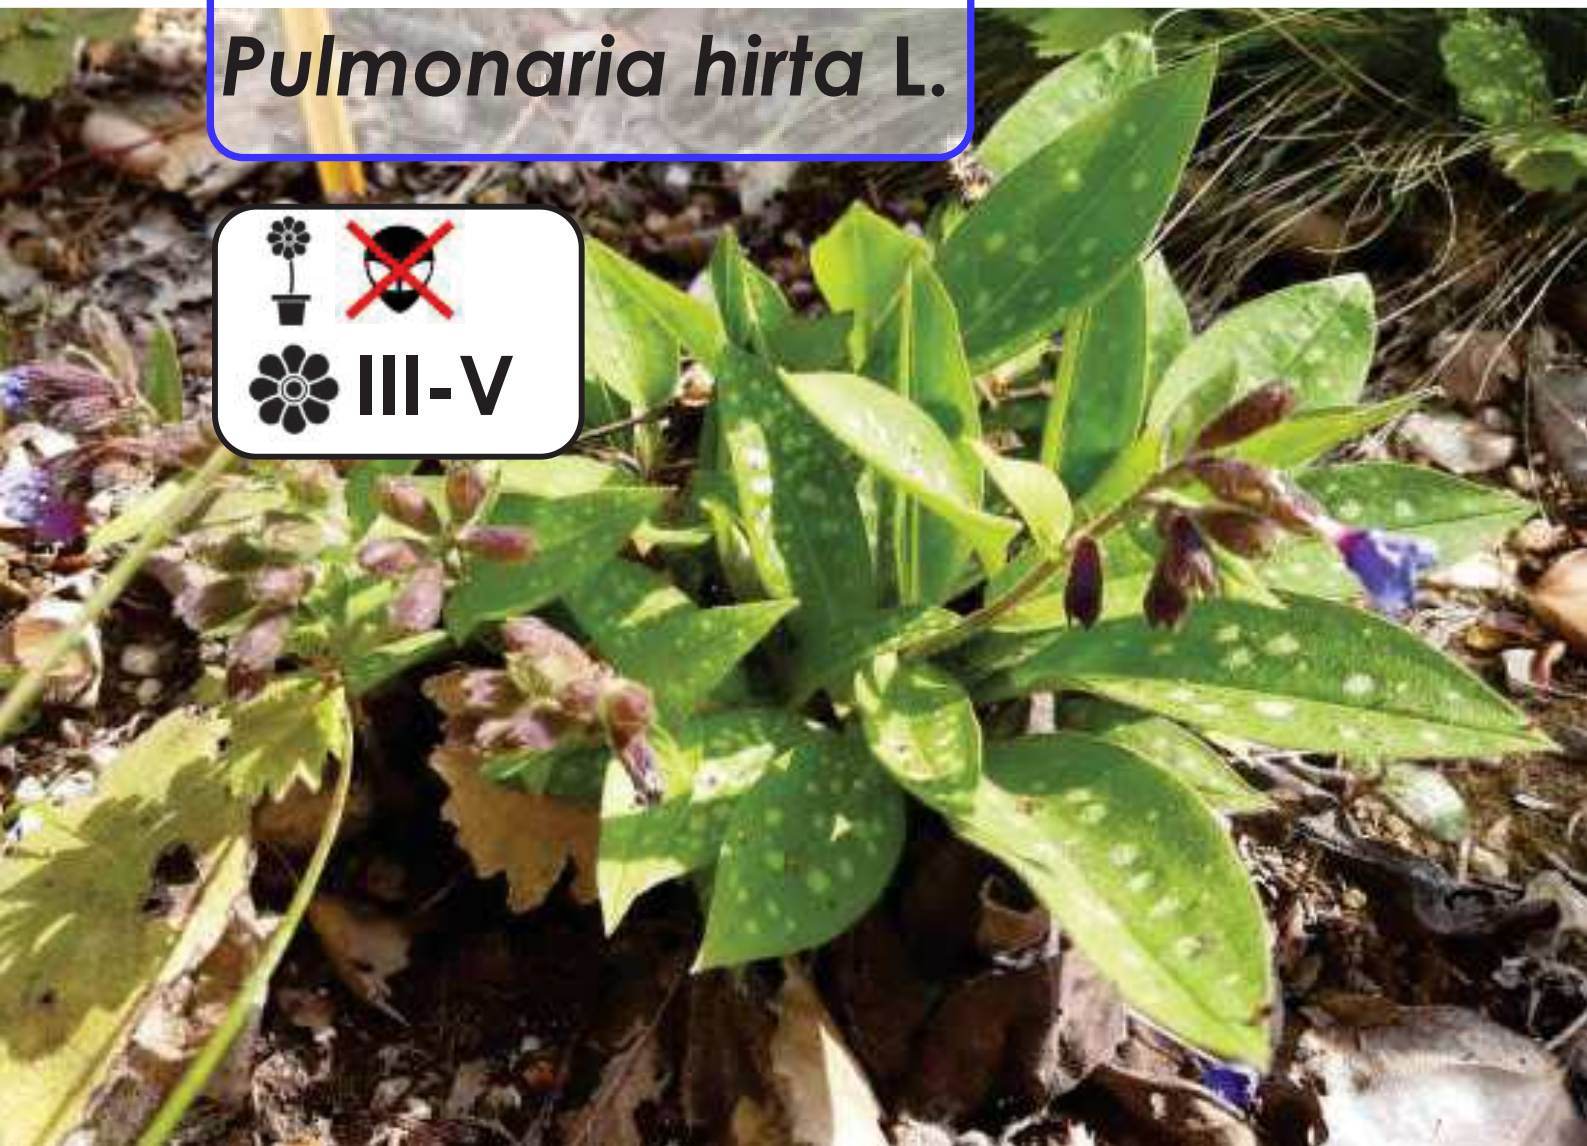

Borago officinalis L.

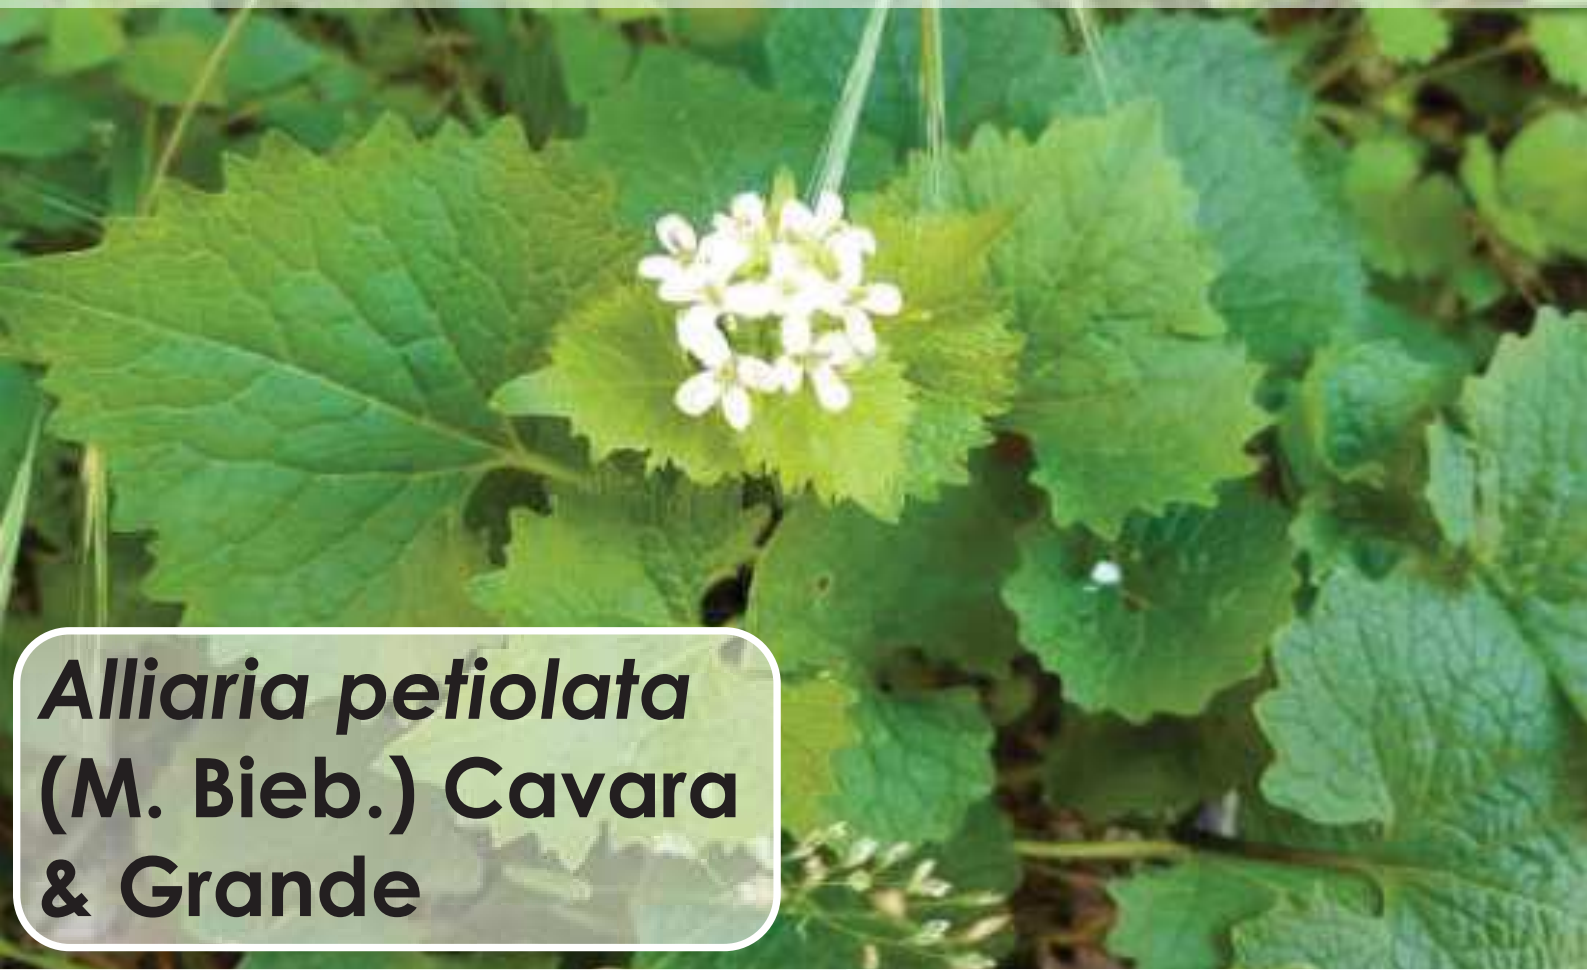

Boraginaceae – pulmonaria chiazzata

Pulmonaria hirta L.

Brassicaceae – alliaria comune

Alliaria petiolata
(M. Bieb.) Cavara
& Grande

 V-VI

Brassicaceae – billeri primaticcio

Cardamine hirsuta L.

***Brassicaceae* – borsa del pastore rossastra**

II-VI

***Capsella
rubella* Reut.**

Brassicaceae – lappolina americana

*Lepidium
didymum* L.

III-VII

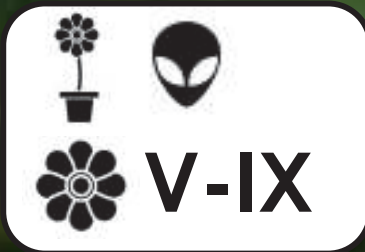

Brassicaceae – senape selvatica

Sinapis arvensis L.

Caprifoliaceae – caprifoglio del Giappone

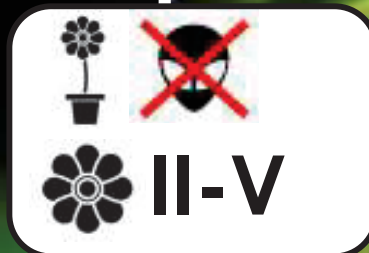

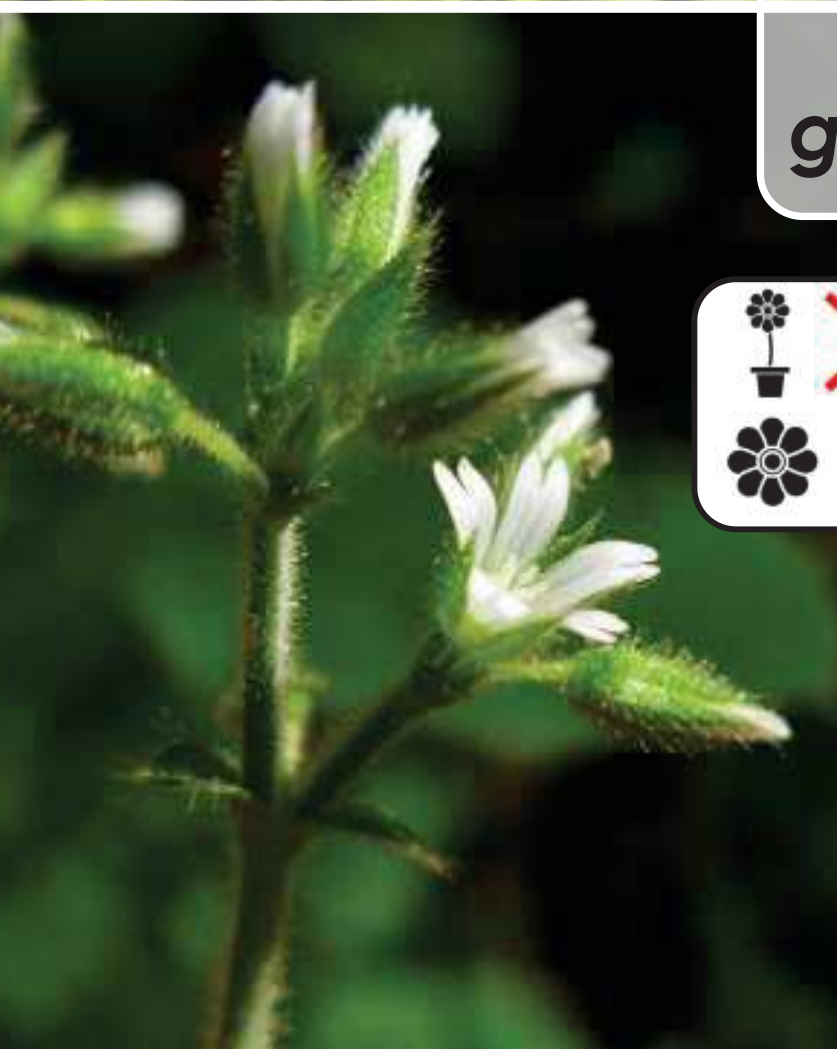

***Lonicera
japonica*
Thunb.**

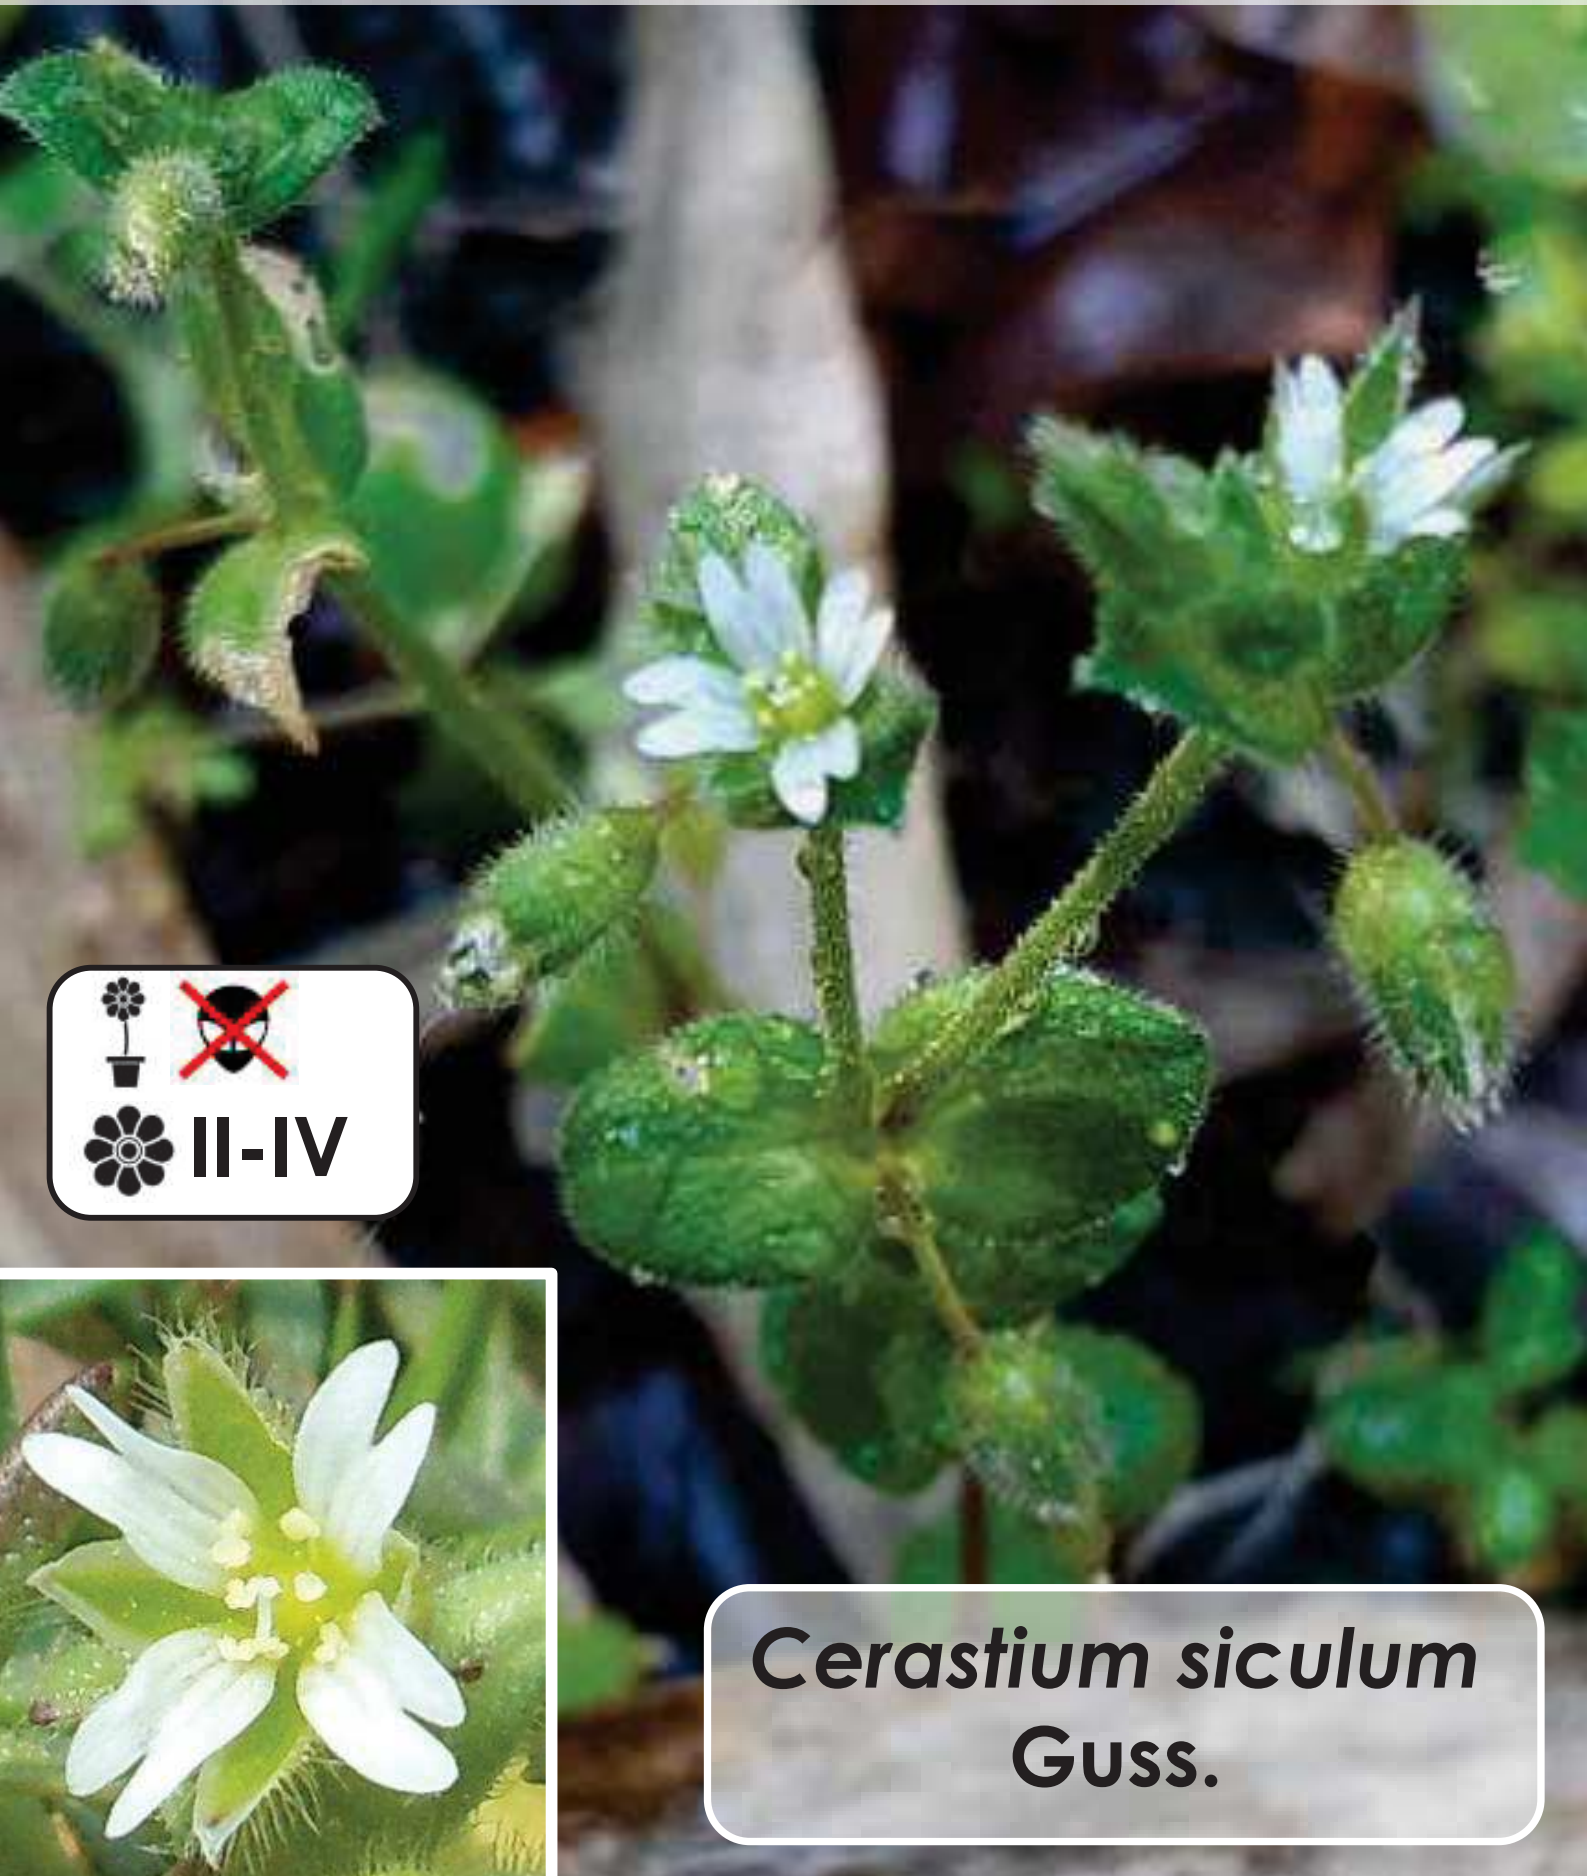

Caryophyllaceae – peverina dei campi

*Cerastium
glomeratum* Thuill.

Caryophyllaceae – peverina *siciliana*

Cerastium siculum
Guss.

Caryophyllaceae – sagina senza petali

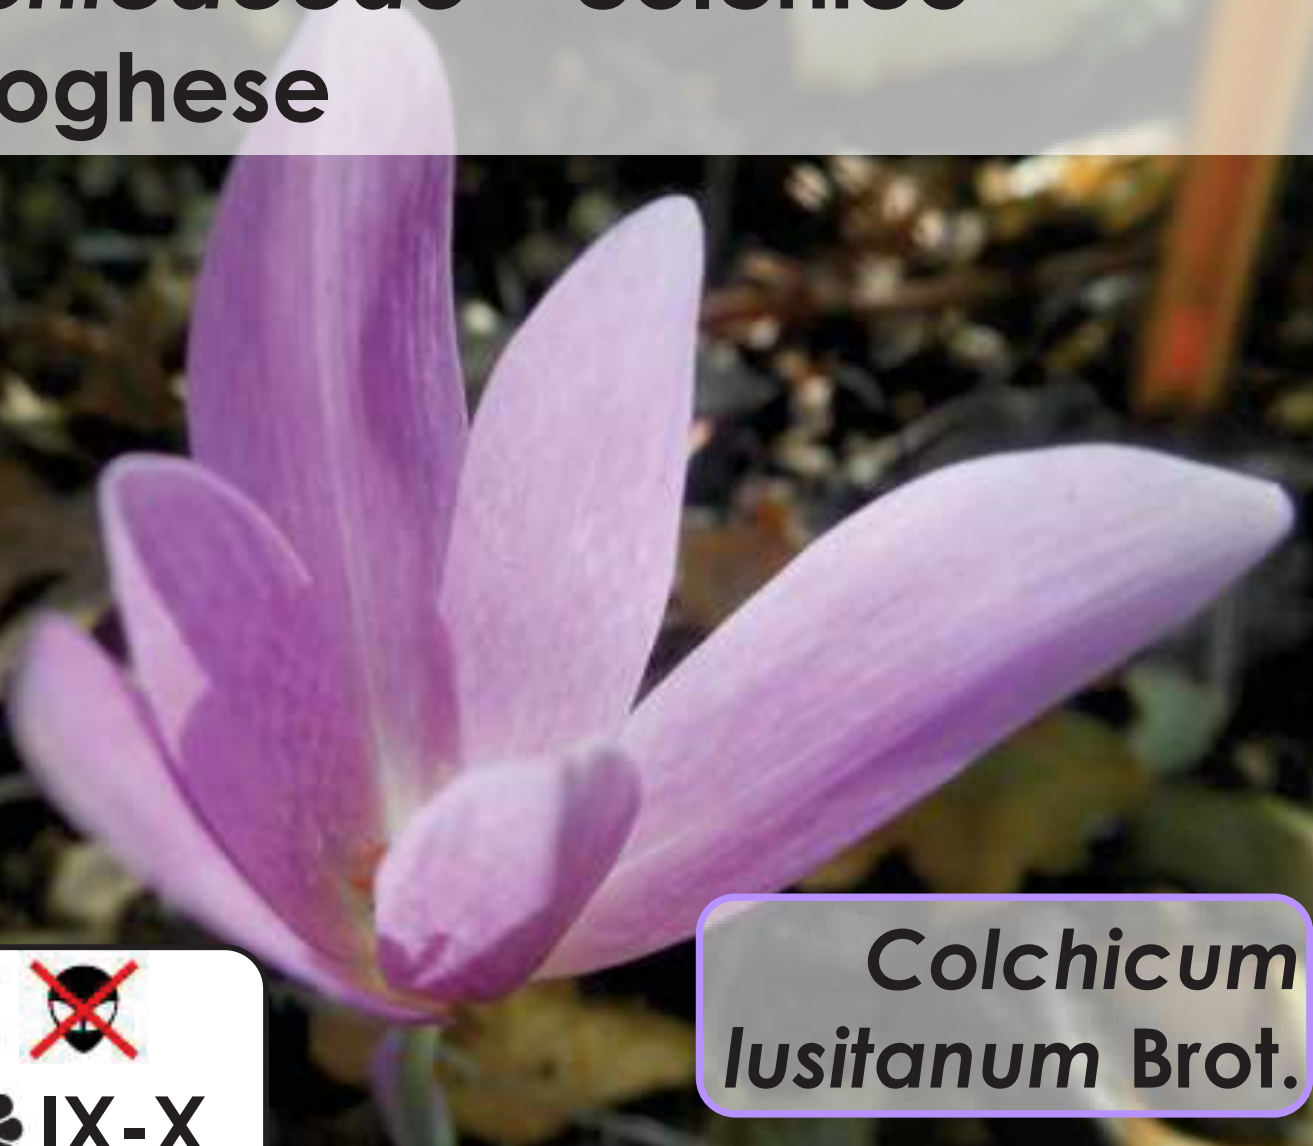

*Sagina
apetala* Ard.

 II-V

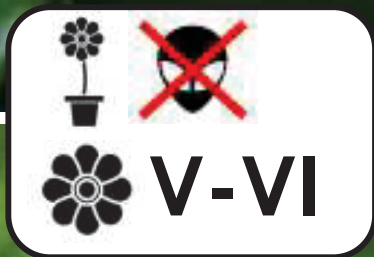

Colchicaceae – colchico portoghese

*Colchicum
lusitanum* Brot.

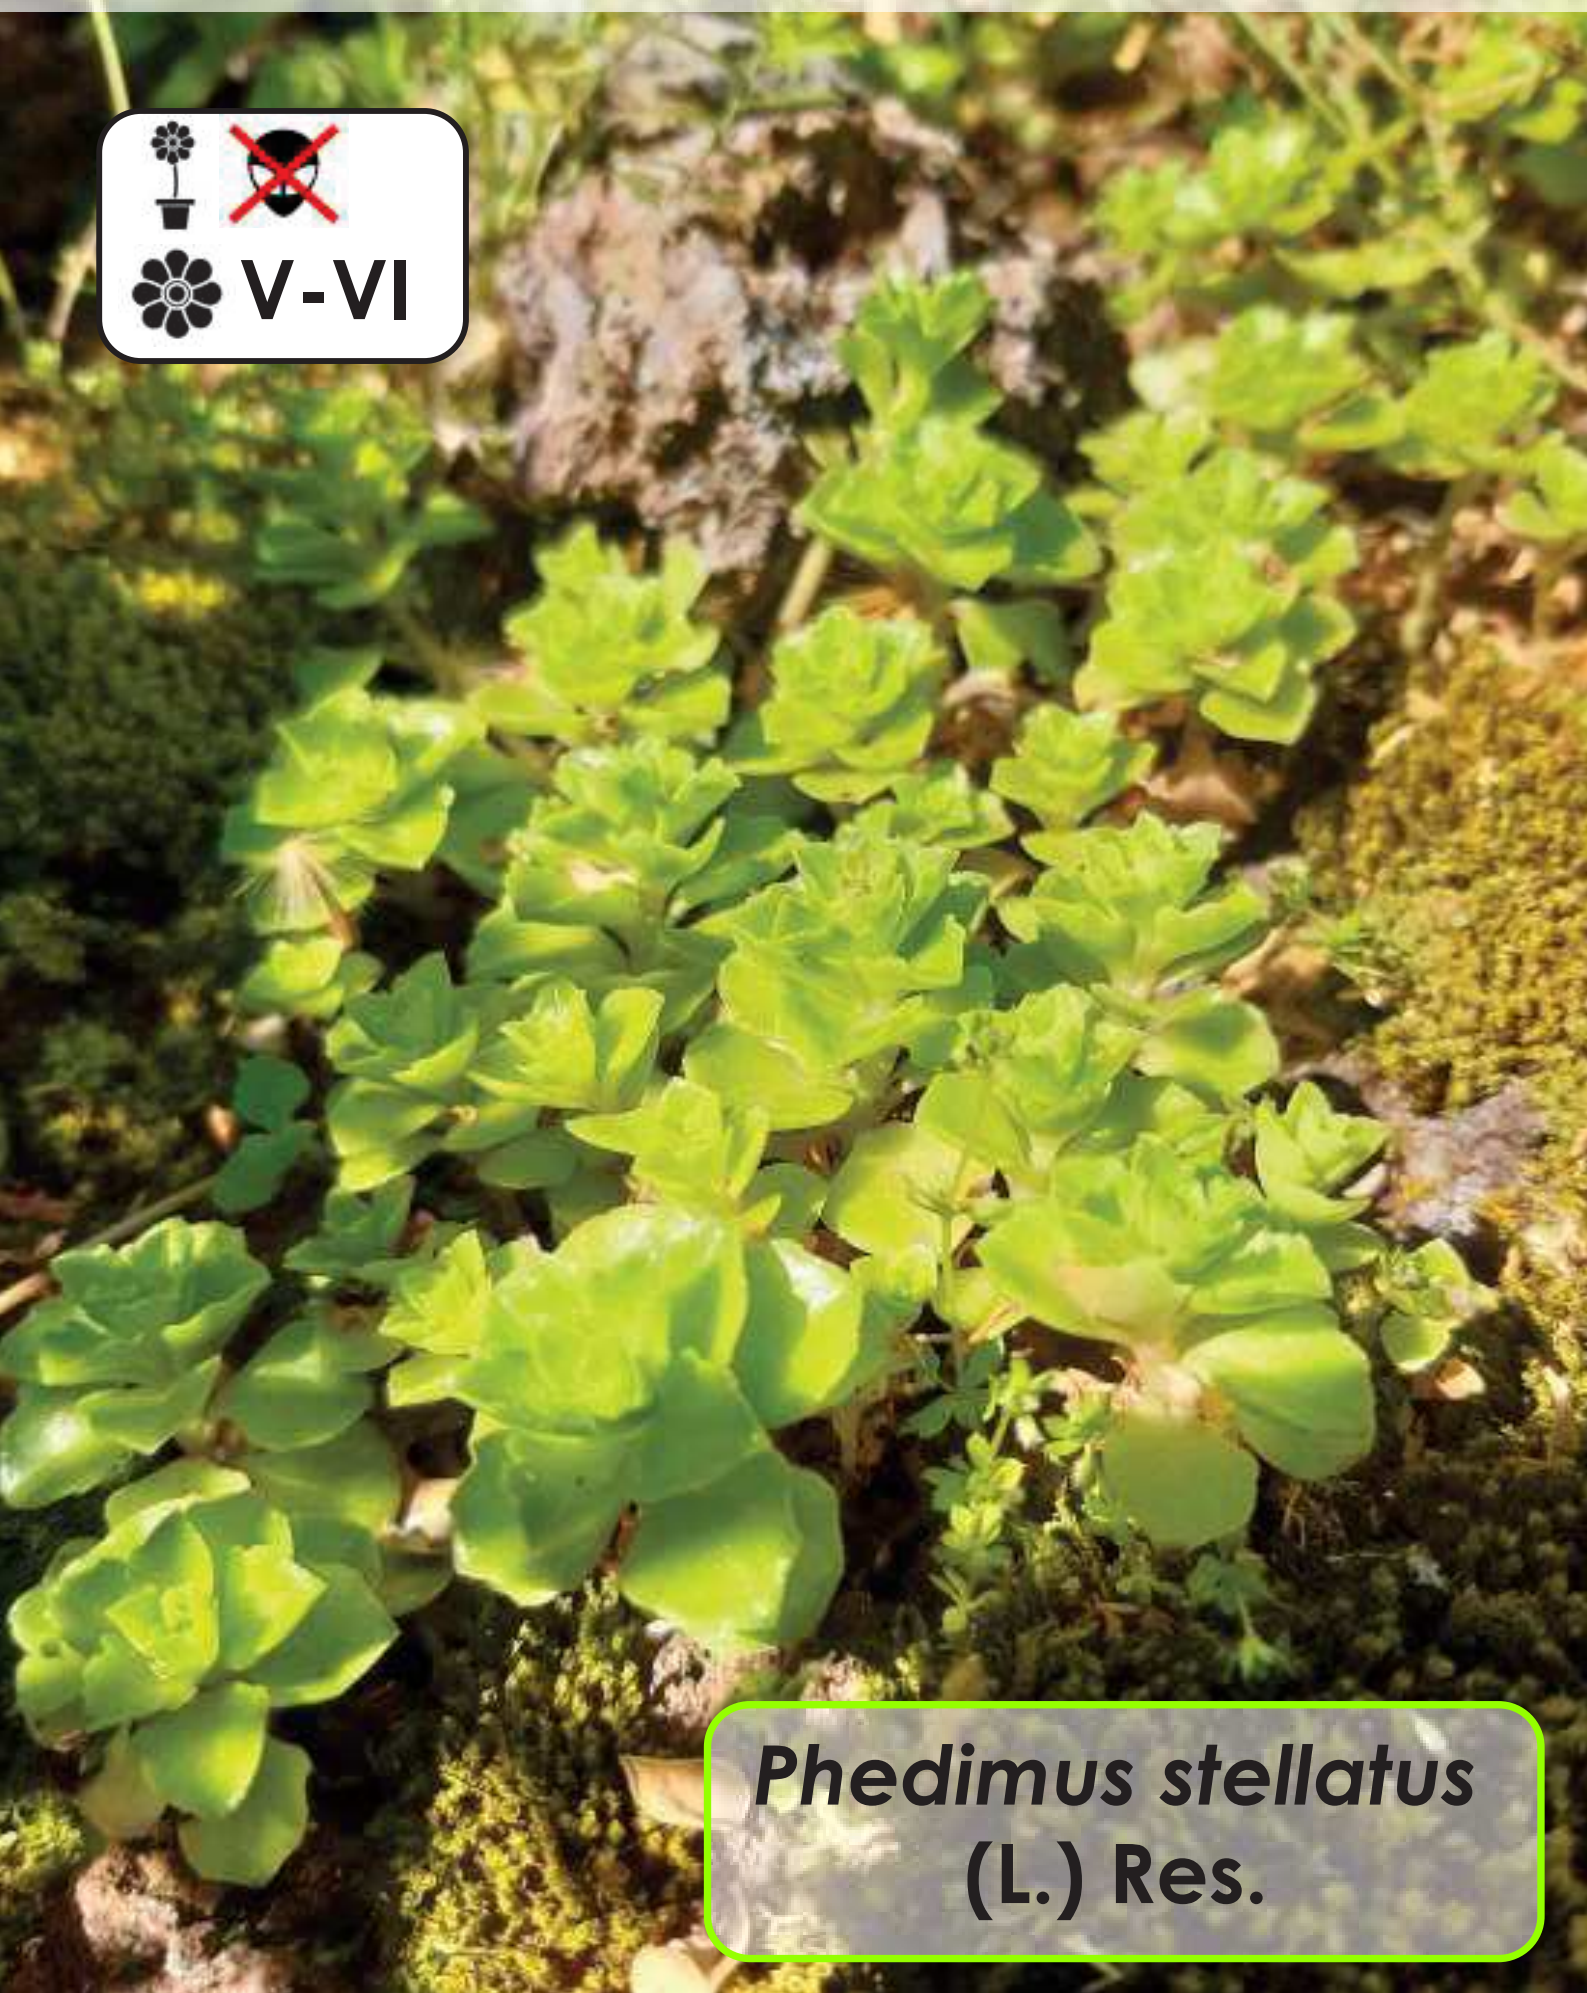

Cornaceae – sanguinello

Cornus
sanguinea L. s.l.

Crassulaceae – borracina spinosa

***Phedimus stellatus*
(L.) Res.**

Crassulaceae – ombelico di venere

Umbilicus rupestris
(Salisb.) Dandy

Cupressaceae – cipresso comune

*Cupressus
sempervirens* L.

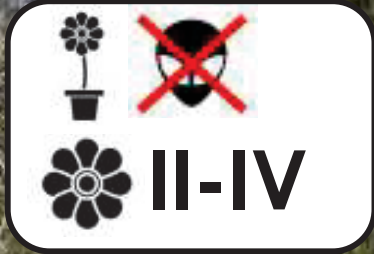

Cupressaceae – ginepro comune

*Juniperus
communis* L.

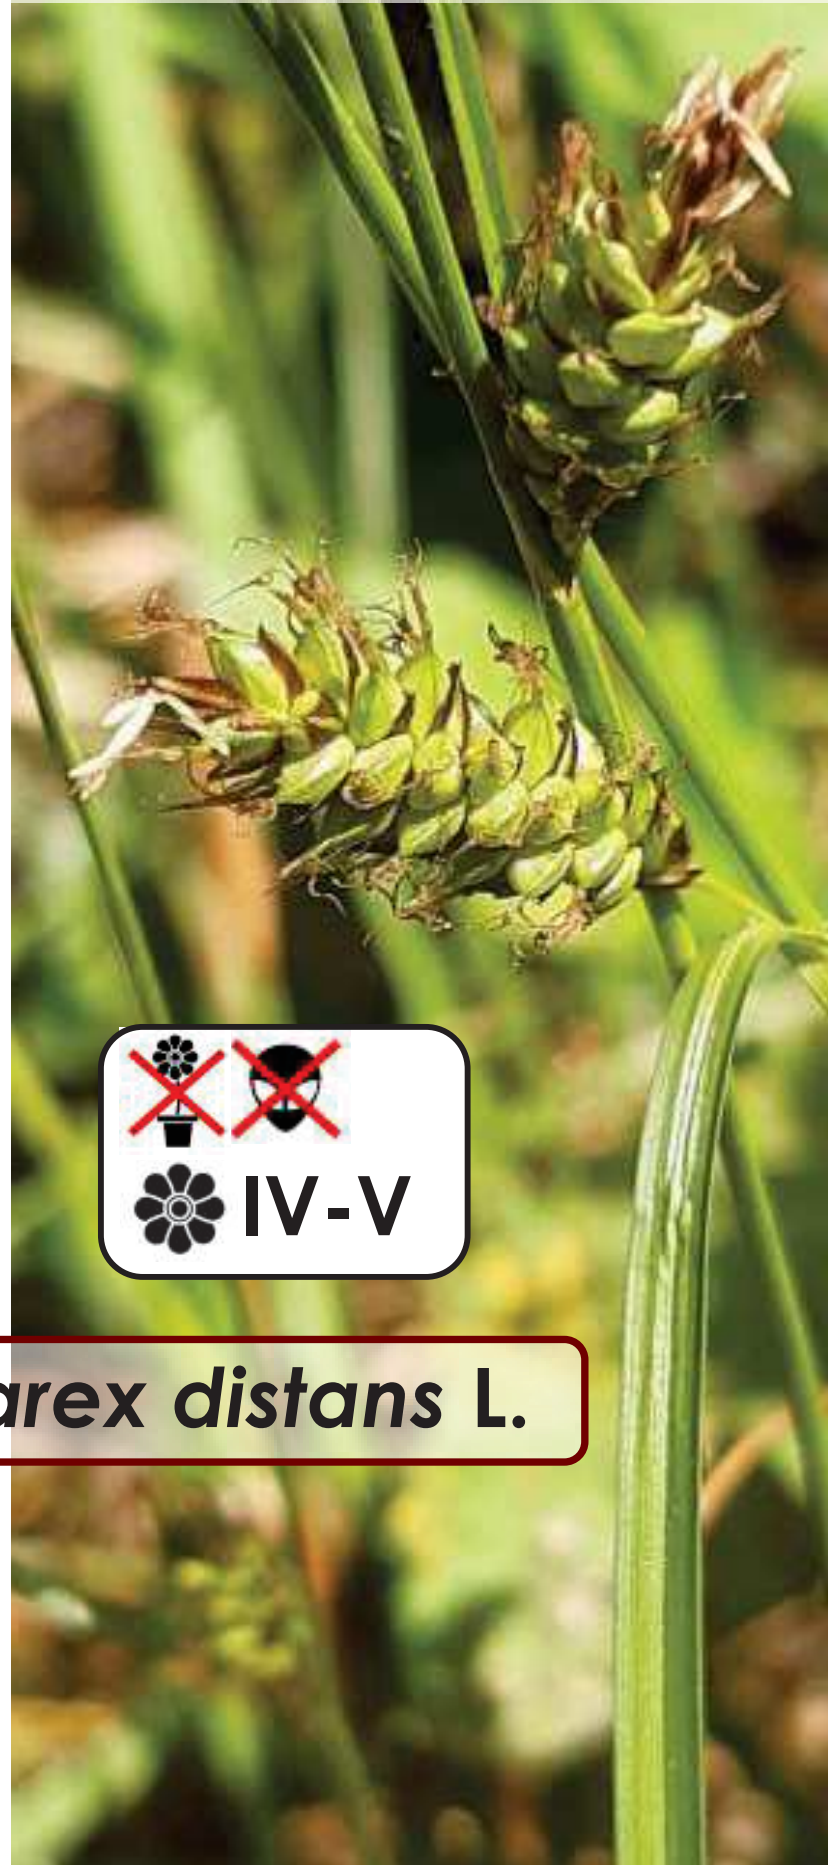

Cupressaceae – ginepro coccolone

*Juniperus
macrocarpa*
Sm.

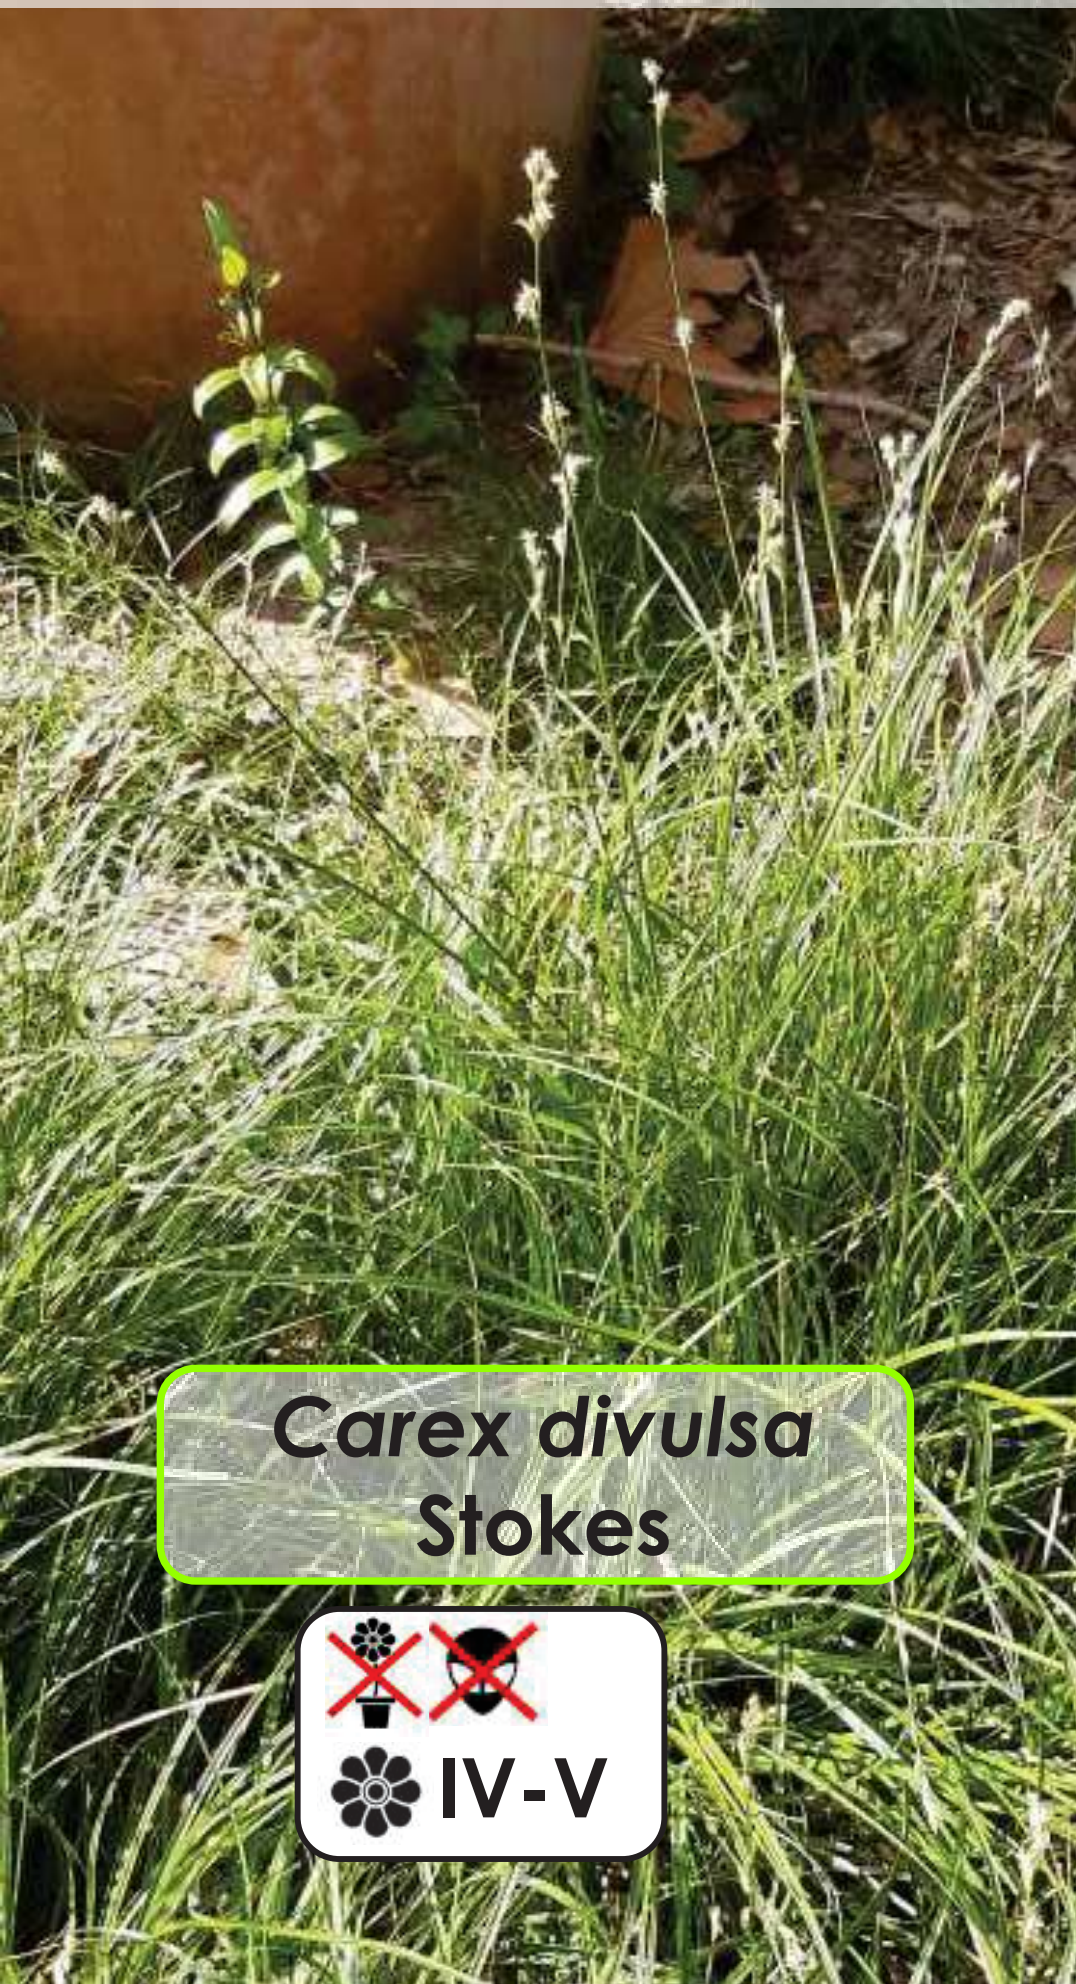

Cyperaceae – carice a spighe distanziate

Carex distans L.

Cyperaceae – carice separata

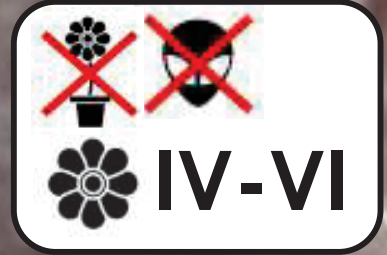

Carex divulsa
Stokes

Cyperaceae – carice glauca

Carex flacca
Schreb.

Cyperaceae – carice di Olbia

**Carex
olbiensis Jord.**

Cyperaceae – carice volpina

Cyperaceae – carice maggiore

Carex pendula
Hudson

Cyperaceae – scirpo romano

*Scirpoides
holoschoenus*
(L.) Soják

Dioscoreaceae – tamaro

*Dioscorea
communis* (L.)
Caddick &
Wilkin

IV-V

Ericaceae – corbezzolo

Arbutus unedo L.

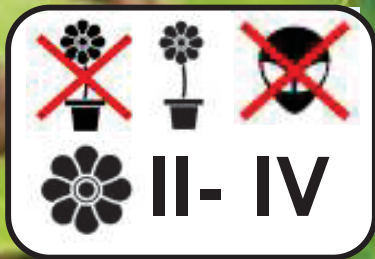

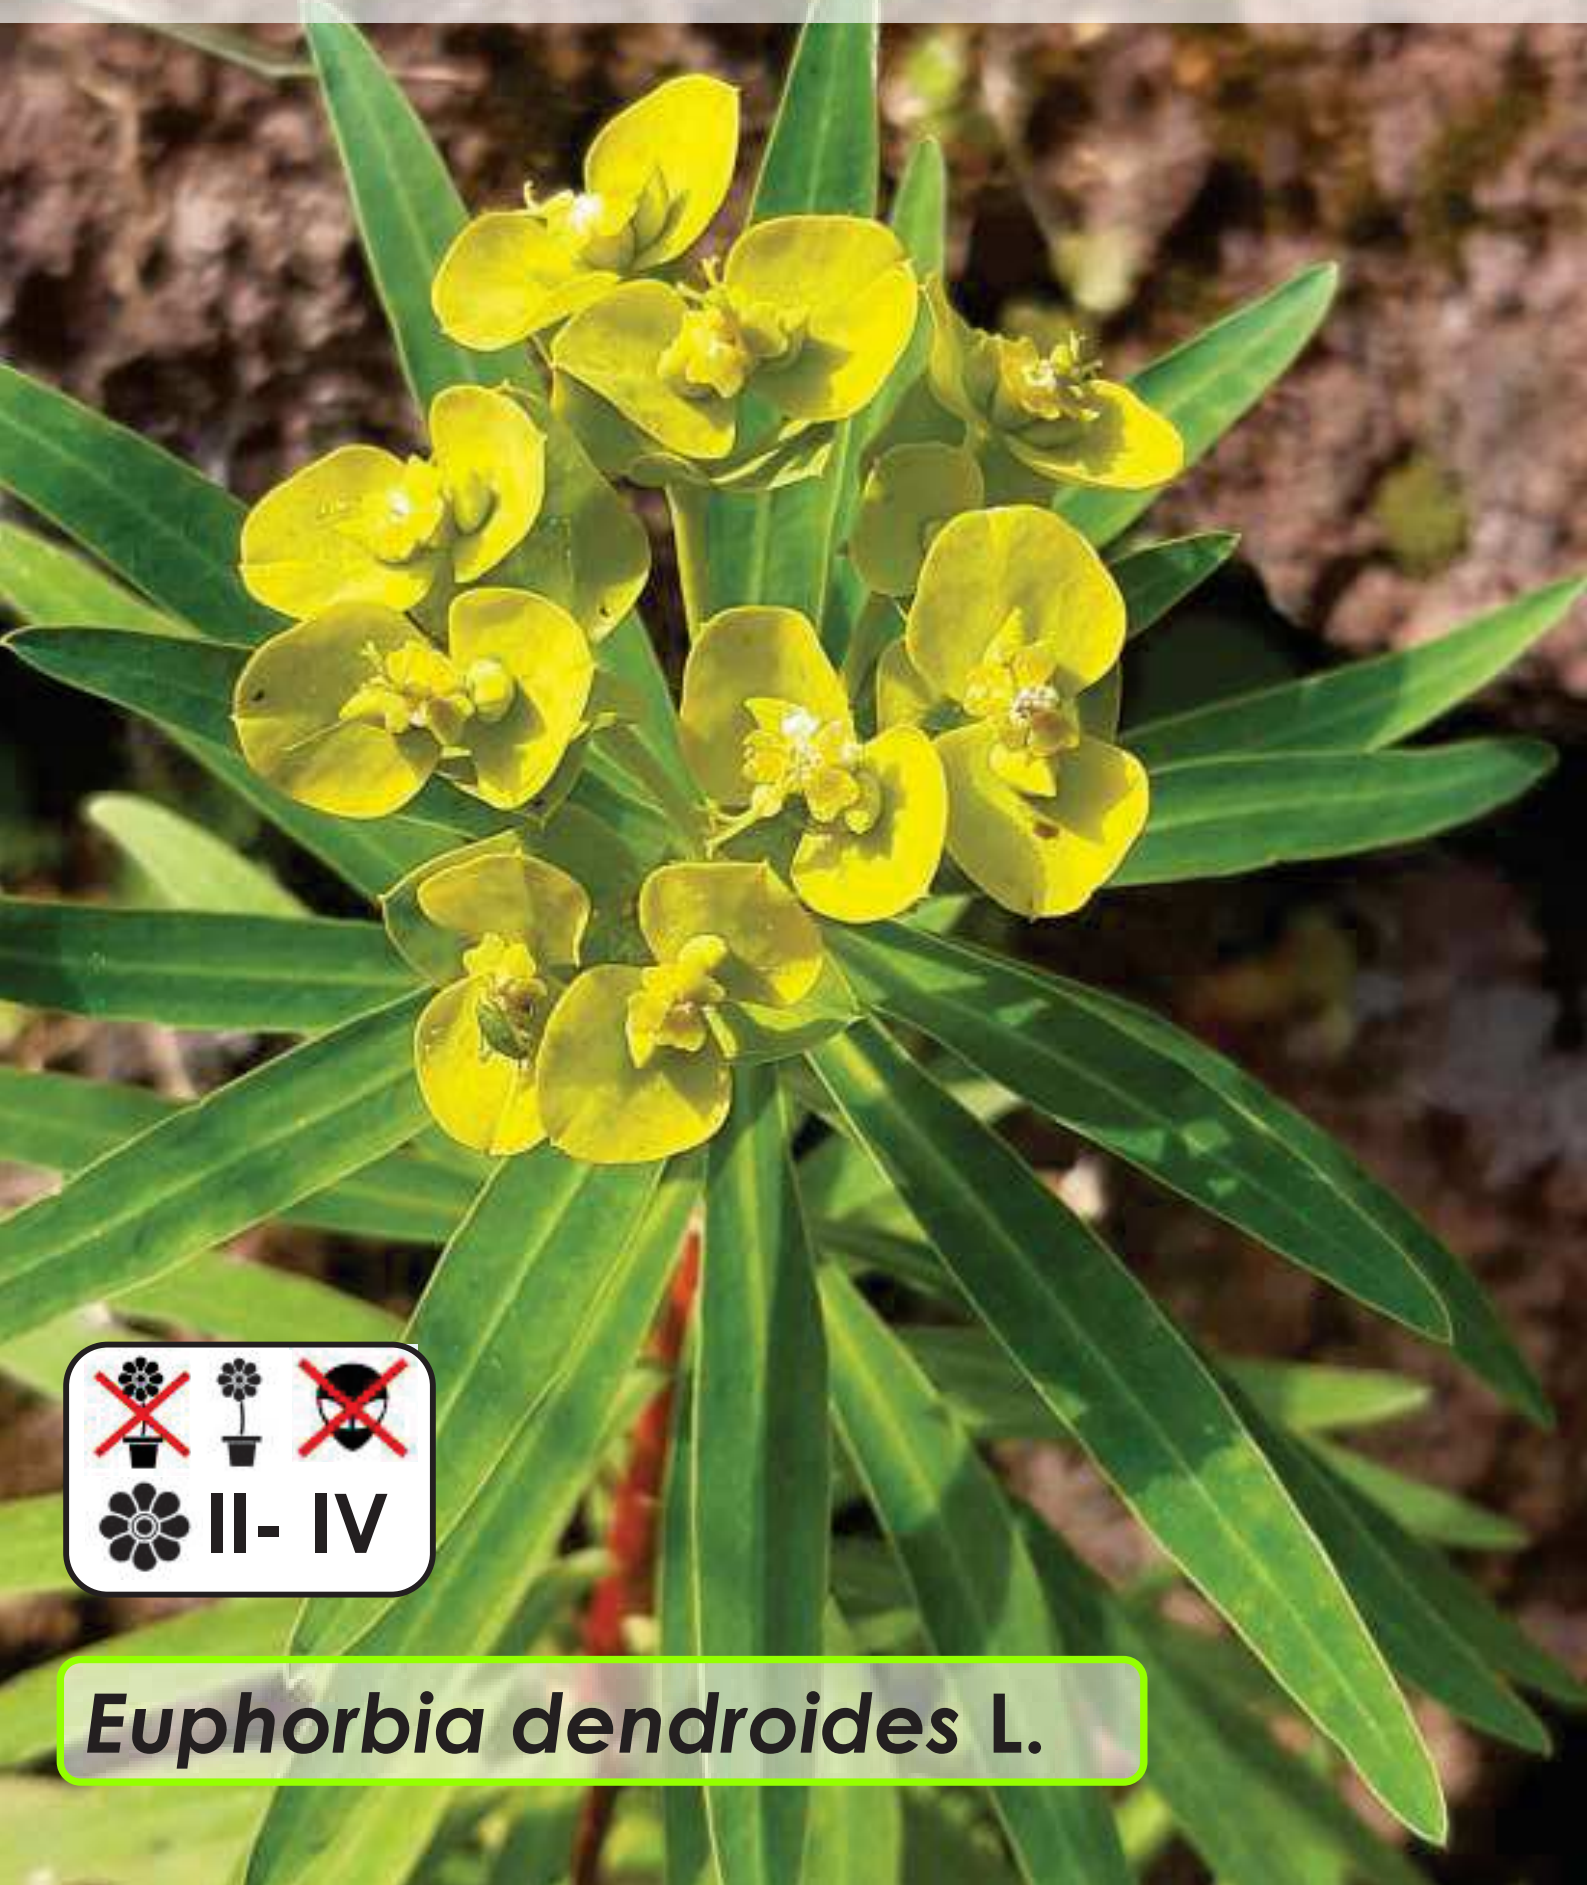

Ericaceae – erica da scope

Erica scoparia L.

Euphorbiaceae – *euforbia* *arborescente*

Euphorbia dendroides L.

Euphorbiaceae – euforbia calenzuola

Euphorbiaceae – *euforbia minore*

Euphorbia peplus L.

Fabaceae – barba di giove

Anthyllis barba-
jovis L.

Fabaceae – carrubo

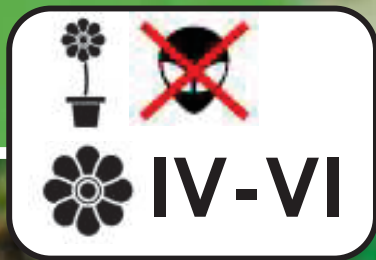

Ceratonia siliqua L.

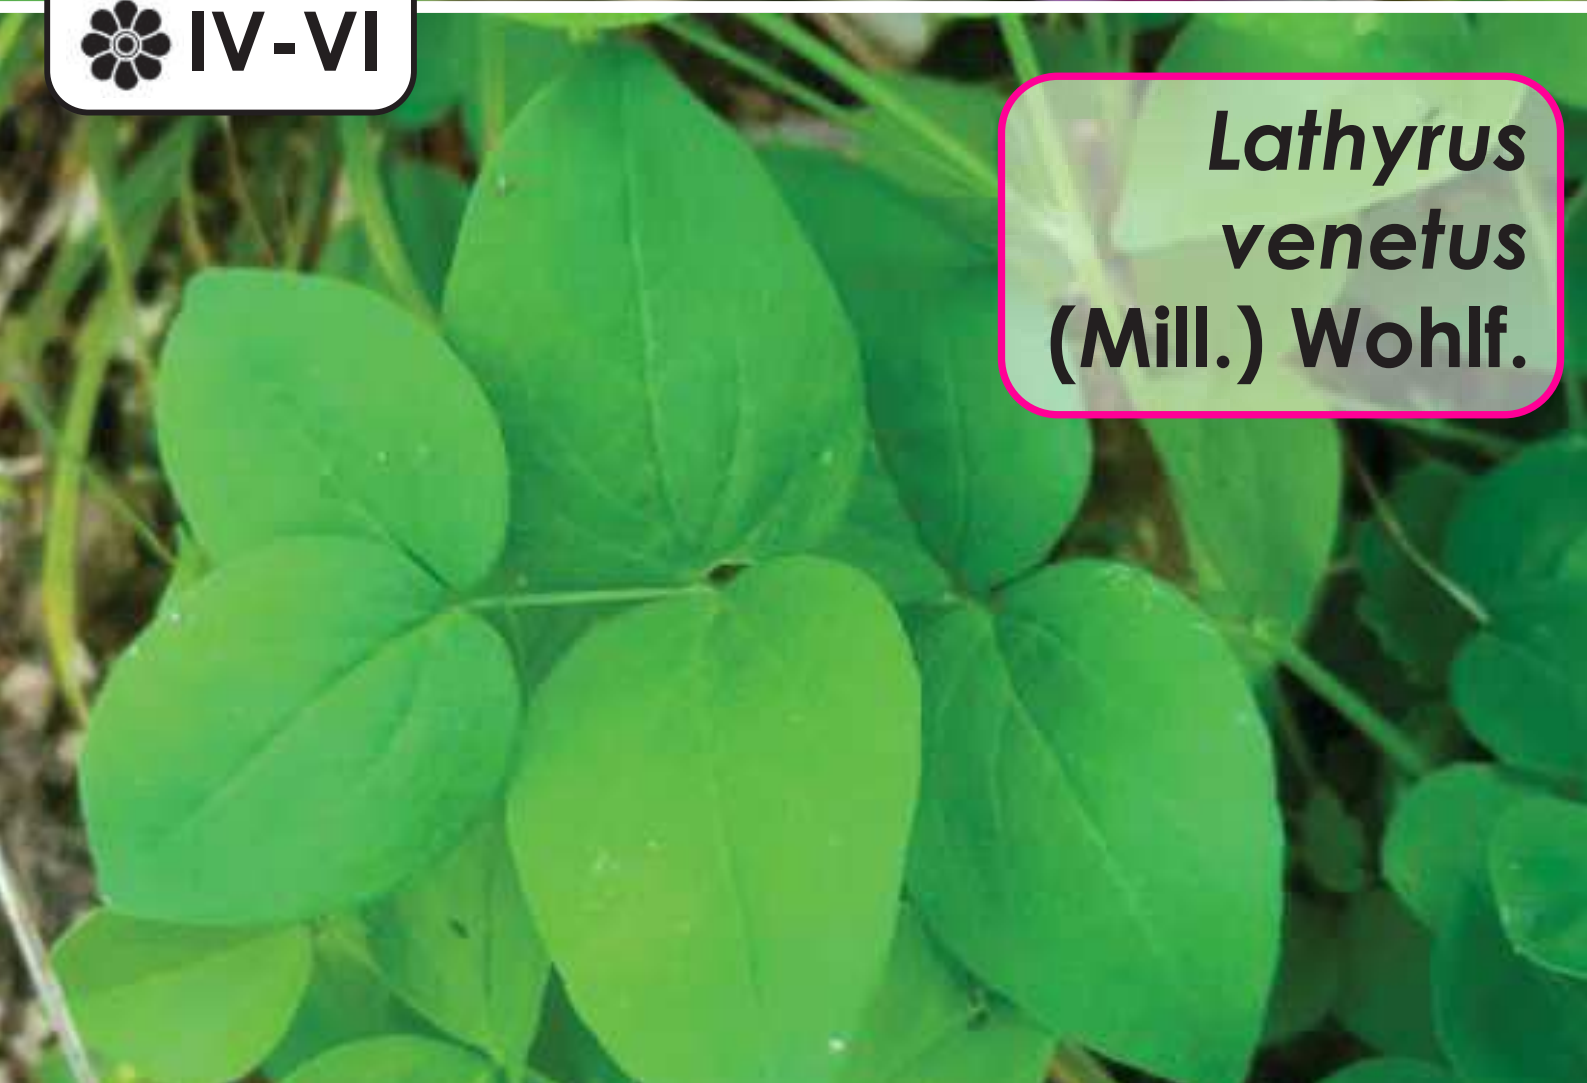

VIII-I

Fabaceae – cicerchia veneta

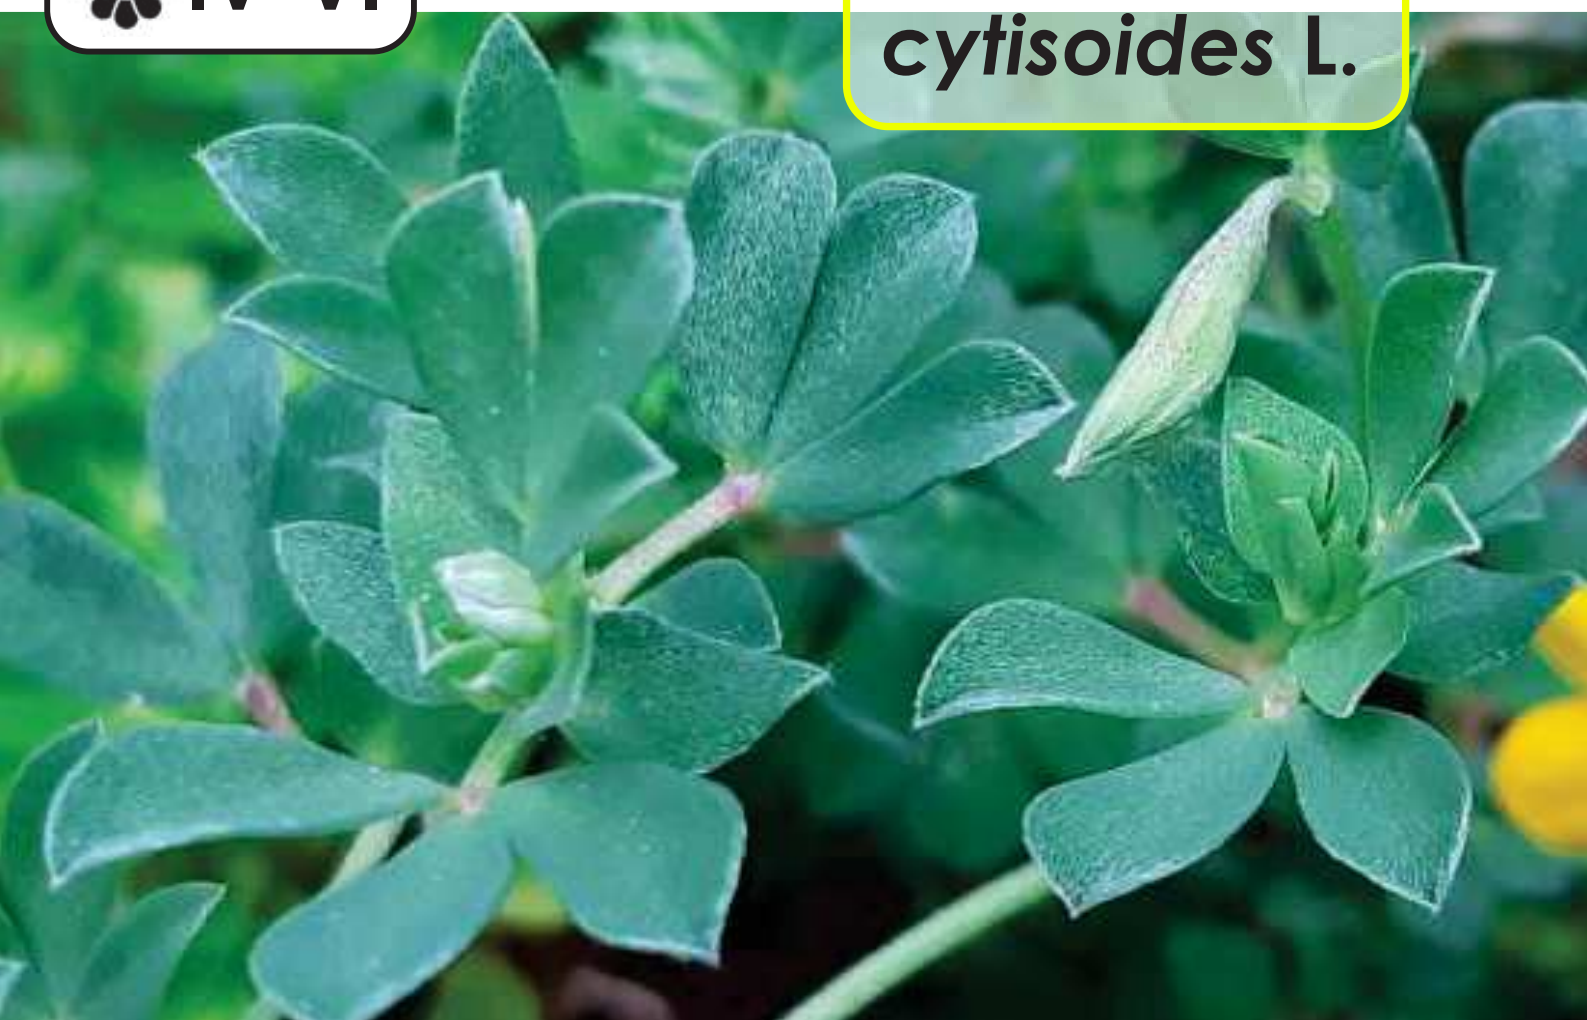

*Lathyrus
venetus*
(Mill.) Wohlf.

Fabaceae – ginestrino delle scogliere

*Lotus
cytisoides* L.

Fabaceae – ginestrino commestibile

***Lotus edulis* L.**

IV-V

Fabaceae – erba medica araba

III-V

***Medicago arabica*
(L.) Huds.**

Fabaceae – erba medica arborea

*Medicago
arborea* L.

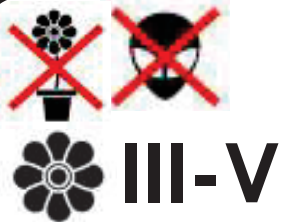

XII-V

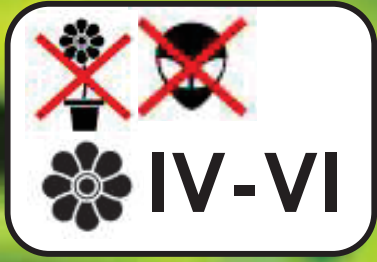

Fabaceae – erba medica litorale

Medicago littoralis
Rohde ex Loisel.

Fabaceae – erba medica lupulina

*Medicago
lupulina* L.

***Fabaceae* – erba medica polimorfa**

***Medicago
polymorpha* L.**

Fabaceae – erba medica troncata

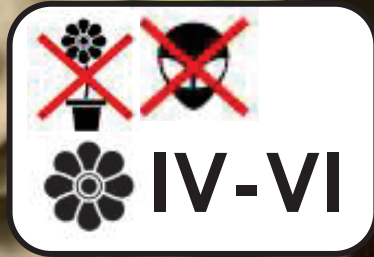

***Medicago
truncatula*
Gaertn.**

Fabaceae – ginestra odorosa

*Spartium
junceum* L.

Fabaceae – sulla

*Sulla
coronaria
Medik.*

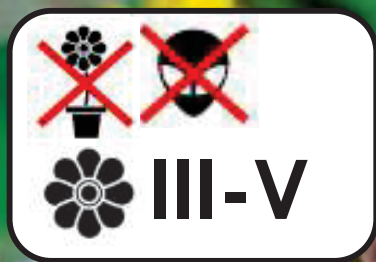

Fabaceae – trifoglio annerente

*Trifolium
nigrescens*
Viv. subsp.
nigrescens

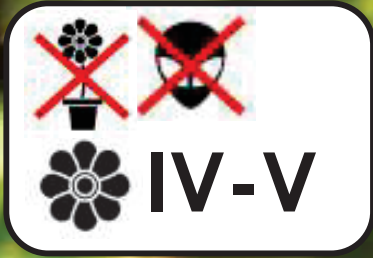

Fabaceae – trifoglio bianco

*Trifolium
repens* L.

Fabaceae – trifoglio resupinato

*Trifolium
resupinatum* L.

Fabaceae – trifoglio squarroso

*Trifolium
squarrosus* L.
